

Injecting Literal Values

Injecting Literal Values

emailAddress: thebestcoach@luv2code.com

team: Sunrisers Hyderabad

Development Process

1. Create setter method(s) in your class for injections
2. Configure the injection in Spring config file

Step-By-Step

Step 1: Create setter method(s) in your class for injections

File: CricketCoach.java

```
public class CricketCoach implements Coach {  
  
    private String emailAddress;  
    private String team;  
  
    public void setEmailAddress(String emailAddress) ...  
  
    public void setTeam(String team) ...  
  
    ...  
}
```

Step 2: Configure the injection in Spring config file

File: applicationContext.xml

```
<bean id="myCricketCoach"
      class="com.luv2code.springdemo.CricketCoach">

    <property name="fortuneService" ref="myFortuneService" />

    <property name="emailAddress" value="thebestcoach@luv2code.com" />

    <property name="team" value="Sunrisers Hyderabad" />

</bean>
```
